J. MOL. BIOL. 279:973-986(1998).

J. MOL. BIOL. BIOL. THE TRANSCRIPTION FACTOR THAT EXHIBITS
POSITIVE AND NEGATIVE CONTROL ON A LARGE NUMBER OF CELLULAR AND VIRAL GENES BY BINDING TO SITES OVERLAPPING THE TRANSCRIPTION START SITE. MAY PLAY AN IMPORTANT ROLE IN DEVELOPMENT AND DIFFERENTIATION. THE FUNCTION OF YYL AS AN ACTIVATOR OR A REPRESSOR IS SPECIFIED BY THE PRESENCE OF OTHER PROTEINS. FOR EXAMPLE IT A GYS AS A REPRESSOR IN ABSENCE OF ADENOVINGS ELA PROTEIN BUT AS AN ACTIVATOR IN ITS PRESENCE.

SUBCELLULAR LOCATION: NUCLEAR. ASSOCIATED WITH THE NUCLEAR MATRIX.

SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C242-TYPE ZINC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE-98152931; PubMed-9493912; McDLINE-98152931; PubMed-9493912; McDLINE-98152931; Stein J.L., Lian J.B., Bushmeyer S., Seto E., Atchison M.L., Penman S., van Wijnen A.J., Stein G.S., "Targeting of the YII transcription factor to the nucleolus and the nuclear matrix in situ: the C-terminus is a principal determinant for nuclear trafficking.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       MEDLINE-98308000; PubMed-9642075;

Nuaf, a viral oncogene that encodes a 'leucine zipper' motif.";
Proc. Natl. Acad. Sci. U.S.A. 86:7711-7715(1989).
-!- FUNCTION: MIGHT BE A TRANSCRIPTIONAL TRANS-ACTIVATOR.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- DISEASE: INDUCES MUSCULOAPONEUROTIC FIBROSARCOMA IN CHICKENS.
-!- MISCELLANGOUS: THIS PROTEIN IS SYNTHESIZED AS A ENV-MAF
POLYPROTEIN.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission

Submitted (21.MAR-2001) Takuji Sasaki, National Institute of Direct Submission

Submitted (21.MAR-2001) Takuji Sasaki, National Institute of Agrobiological Sciences, Rice Genome Research Program; Kannondal 2-1-2, Tsukuba, Ibaraki 305-6602, Japan (E-mali:tsasaki@ilas.affrc.go.jp, URL.http://rgp.dna.affrc.go.jp/, On Oct 17, 2001 this sequence version replaced gi:13430001.
Genes were predicted from the integrated results of the following: GENSCANI.0, BLASTN2.0, as well as Splicepredictor (October 1998 version). The genomic sequence was searched against NCBI NonRedundant Protein database, nr (ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at RGP. Protein homologies of the coding regions were searched against NCBI NonRedundant Protein database with BLASTP2.0, ESTS represent

                                                                                                                                                                 * Working draft' sequence. It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and by the finished sequence as soon as it is available and the accession number will be preserved.

* 53113: contig of 53113 bp in length

* 53214 172405 contig of 119191 bp in length

* 172405 172504: gap of unknown length

* 172405 172504: gap of unknown length

* 172405 172504: gap of unknown length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and 'like protein'. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orlentation of the sequence is from SP6 to T7 of the PAC clone. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /translation-"MSKLAIIGRSSGLPRSNEGMRLLFSAVICVMLGYLFGISFPTVN

NOTE: This is a 'working draft' sequence. It currently consists of 77 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
